Lights Necessitate More Poultry Feed
Poultrymen should remember that artificial lights stimulate egg production only because they encourage greater feed consumption and that more grain should be provided when lights are used, advises J. C. Taylor, associate extension poultryman at Rutgers university.
If the amount of grain fed is increased two to four pounds per 100 birds a day so that about 14 or 16 pounds are consumed daily, it will be easier for laying birds to maintain good body weight. When the limit has been reached in the amount of grain the birds will eat, a flushing mash of ground oats, ground yellow corn and milk may be fed to further aid in the maintenance of body weight.

START THE YEAR WITH THE CAR YOU WANT

Birds Save Our Crops
The humming bird is one of our tiniest and loveliest birds, one you usually see hovering daintily before a blossom as he sips nectar. But a substantial portion of his diet consists of spiders—some nearly as big as he is. This is one of the birds that eat the insects that would eat the crops that we eat. As long as they stay on the job we eat. Other birds that protect our crops include the woodpeckers, cedar waxwing and the indigo bunting, cardinals and the junco fledglings.

More Economical to Buy Larger Refrigerator
The big thing to keep in mind when you're buying a refrigerator is that you want a piece of equipment that will keep perishable foods safely. This means that it must be so constructed that the temperature in food storage compartments is kept below 50 degrees Fahrenheit.
The insulation of the refrigerator must be thick enough to prevent a large amount of heat penetrating from the room to the inside of the cabinet.
Tightly fitting doors with sturdy latches and hinges that won't permit sagging are important. They should be fitted with gaskets to prevent heat from getting into the cabinet.
The space available in the kitchen for a refrigerator is one of the factors that determines the size you will buy.
No definite rule can be given for buying a certain size box, but sizes that offer 6 cubic feet of food storage space or more are more popular than the smaller sizes. A larger box means that you can buy more food at once to take advantage of special prices and to save time in marketing because you can keep it perfectly.
Remember that a crowded refrigerator, no matter what type you have, does not protect food adequately. There must be good circulation of air in the cabinet.
The cost of operating a larger refrigerator is little more than for a small one, nor is the purchase price a great deal higher. It's more expensive to replace an inadequate refrigerator with a larger one. It's always well to remember that the need for food storage may grow, and the refrigerator will always be the same size.

Tug of War Collegiate Most Popular Sport Once
Though few American citizens can remember or believe it, tug of war was once the most popular of intercollegiate sports.
"A good tug of war team of the eighties, whether in school or college," writes Malcolm Kenican, headmaster of Malcolm Gordon school in Garrison, N. Y., "compares favorably with a well-trained crew in technique, precision and rhythm . . . There were five men to a team . . . The rope was about 75 feet long . . . Exactly in the middle of the platform there was a red lever which held the rope preparatory to the 'drop' or start . . .
"As the two teams take their position, the rope, which is taut, is held down by the lever on which the referee stands. At the word 'heave,' he jumps off the lever and so releases the rope.
"The anchor-man, around whose hip-belt the rope passed to a double-hitch . . . had to observe the opposing team . . . He gave signals verbally or by facial signs and he had the all-important job of taking in the slack or letting out the rope, by skilful handling of the 'knot.'
"To pull with all one's strength for five minutes against what was practically a dead weight without the slightest chance to relax a muscle was a severe test of endurance."

FARM TOPICS

SOY BEANS ARE VALUABLE FEED

Keep Bean Rations Low for Best Results.

By W. H. PETERS
(Professor of Animal Husbandry, University Farm, St. Paul.)

Whole soy beans as raised and threshed on the farm have a high feed value, but the feeder should use caution in making up his ration to include such beans. On the basis of experiments carried out to evaluate soy beans in the live-stock ration, several guides have been established.

(1) Do not feed soy beans in excess of 10 per cent by weight of any grain ration for any type of animal. If beans are fed more heavily than this, the high oil content will cause scouring and disturbances of the digestive system. If fed heavily to such animals as high producing milk cows, fattening hogs, cattle or lambs, such animals will in two to three months' time lose their taste for the beans, and voluntarily cut down on their eating.

(2) Soy beans fed in excess of 10 per cent of the ration to dairy cows may cause soft butter. Likewise, overfeeding of fattening hogs on beans is quite certain to produce soft pork.

(3) In so far as possible soy beans should be fed whole without being ground at all. They are just as palatable in the whole form as after they are ground. Because of their high oil content, soy beans become rancid and objectionable in odor and taste very soon after being ground. If they must be ground to fit in with the rest of the ration, they should be crushed only medium fine, and a fresh supply prepared once each week.

(4) Such practices as cooking or soaking soy beans before feeding them have not proved necessary or profitable.

(5) Whole soy beans have their most satisfactory use in feeding when they are fed as a small part of the grain ration to fattening cattle and lambs and high producing milk cows.

Chickens Need Warmed Water in Winter Months

An egg is 70 per cent water!
That is a fact that C. F. Parrish, extension poultryman of N. C. State college, constantly impresses upon poultry raisers in urging that they provide their flocks with plenty of clean water in convenient fountains.
"Arrange for some heated water fountains for the flock to use during this cold weather. Water consumption is greater when the chill is taken off, and the more water a hen drinks, the more and the larger her eggs," Parrish added.
The specialist also warns that drafts through openings in the back and ends of the laying house should be eliminated by closing such openings. "Winter is the time to make money from egg production, when the supply is short," he said. "There is a surplus of eggs only during about six weeks in the spring. That leaves about 46 other weeks in the year that our homes and home markets are not amply supplied with quality eggs.
"By selecting chicks of good breeding, and by proper housing and feeding, the farm flock can be managed so as to produce eggs every month in the year."

Agricultural News

Soybean production this year is indicated to be 81,500,000 bushels, approximately 6,000,000 bushels below the 1939 production, estimates the U. S. Bureau of Agricultural Economics.

* * *

Tests conducted at Oregon State college show that fence posts with the butts charred do not last as well as untreated posts, but green posts treated with a salt combination last almost indefinitely.

* * *

Present indications are that an all-time high of 8,000,000 bales of cotton will be used in the United States alone during the coming year, although exports will not exceed two million bales.

* * *

The current Canadian wheat crop, estimated at 561,000,000 bushels, probably exceeds domestic requirements by 275,000,000 bushels, report U. S. department of agriculture foreign experts.

* * *

A milking cow should never get more than four tablespoons of cod-liver oil per day.

* * *

A winter cover crop returns to the grower many times his investment in seed, fertilizer, and labor by conserving soil, moisture and fertility.

* * *

English farmers are being urged to gather acorns, horse chestnuts and beechnuts to eke out the feed-stuff supply of farm animals and thereby release tonnage for other needed imports.

Evergreen News Items

Evergreen, Jan. 8.- Old Man Winter came back to see us Saturday P.M. with a rush that drove recent warm weather into the ocean or perhaps the other side of the equator. The lakes are frozen over and the ice probably three inches thick, and with a few more cold days there should be good skating.

W. C. Garrett is butchering some large fat hogs today.

Elijah Farrar spent Friday night at his home here.

Mr. and Mrs. R. S. Hudnall, of Lynchburg, visited relatives at "Westside" Monday.

Miss Madian Lee and Miss Driscoll, of Lynchburg, were Sunday guests of Mrs. Ada Farrar.

Riley Jr., the young son of Mr. and Mrs. L. L. Stewart is sick.

We have just heard that Mrs. Emma Thomas is ill, we trust not seriously.

Mr. and Mrs. Archer LeGrand and family have moved into the house recently purchased from the R. L. Fitzhugh estate.

Mr. and Mrs. Roy Conner, of Lynchburg spent the week end here.

The funeral of Mrs. W. E. Davis, 64, a native of Evergreen, who died in a Roanoke hospital Sunday was held at Oakey's Chapel in Roanoke Tuesday at 11 A.M. Interment was in the Ingre family cemetery near Evergreen at 3 P.M., with Rev. C. A. Collins Jr officiating, assisted by Rev W. M. Thompson of Petersburg

Surviving are a daughter, Miss Odell V Davis, a brother, B. F. Ingre of Roanoke and three sisters, Mrs. E. W. Hamilton of Roanoke, Mrs. H. W. Glenn of Evergreen, and Mrs. W.E. Lumm, Jr., of Petersburg.

There was a calamnity here the other night when a young man struck a match to light on oil lamp, when he thoughtlessly tossed the blazing match to one side. When he next looked around, the window curtain was blazing. Had he left the room before discovering the effect of his carelessness, there might have been a serious fire.

Born to Mr. and Mrs Geoffrey Austin a birl, January 7th.

Way "Build-up" Helps Will Interest Women

The cause of a woman's periodic suffering from headache, irritability, cramp-like pain, may be *functional dysmenorrhea* due to malnutrition, a condition that is often helped by CARDUI.
Principal way CARDUI helps is by stimulating appetite and the flow of gastric juices. Thus it may aid digestion; help build up a woman's strength, energy and nerve-force; so increase physical resistance to periodic discomfort.
It also helps reduce periodic distress for many who take it a few days before and during "the time." Your confidence in CARDUI is invited by its 50 years of popularity.
